

AMENDMENTS TO THE SPECIFICATION

Page 3, lines 7-13 should be replaced with:

Cookies are the colloquial term for the "HTTP State Management Mechanism" that is more fully defined in the Internet Engineering Task Force (IETF) Request For Comment (RFC) 2109.

In a similar vein, a modified standard is being developed for proxy state management. See "HTTP Proxy State Management Mechanism" draft proposal to the IETF.

Page 16, lines 13-15 should be replaced with:

For example, if the voice portal 110 operates the web server 108 on the URL "voiceportal.com", a co-branded site might be identified using a special name, e.g. "merchant.voiceportal.com", or from the HTTP referrer information. In

Page 16, lines 18-19 should be replaced with:

Continuing the example, the redirection will be to "merchant.voiceportal.com" and several arguments will be passed including:

Page 16, line 25 should be replaced with:

```
"{cobrandname}.voiceportal.com/?link={linking  
code}&return={return url}"
```
